# What is Planet Aqua?

Planet Aqua is a water consumption tracking app

Its purpose is to make people conscious of the amounts of water they spend per day and help them keep a better track of it to prevent the global water shortage expected to occur in the near future

# Why counting water?

- Electric cars are widely used to prevent air pollution;
- Laws restrict chemicals release into the dirt to prevent soil contamination;
- Endangered animals are being kept in safety to prevent extinction;
- Recycling is being improved to stop plastic pollution;

Water shortages is one of the major environmental problems at hand.  
And there is still no solution for it.

# What can YOU do?

Although the problem is global, it is time to take it personal

Planet Aqua is a lightweight app that will help you estimate whether you are over spending the water.

Make one click on the World's Water Day

One click before you open the tap water or turn your washing machine on.  
Do it once a year, for the World Water Day, or on a daily basis.

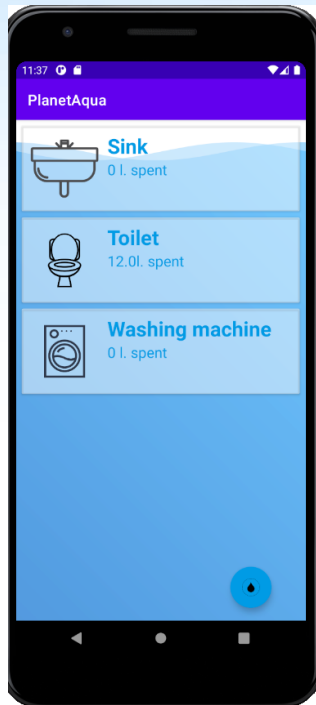

The Blue Planet must remain blue

It is estimated that by 2025 more and more people will experience water shortages. It is time to become conscious now.

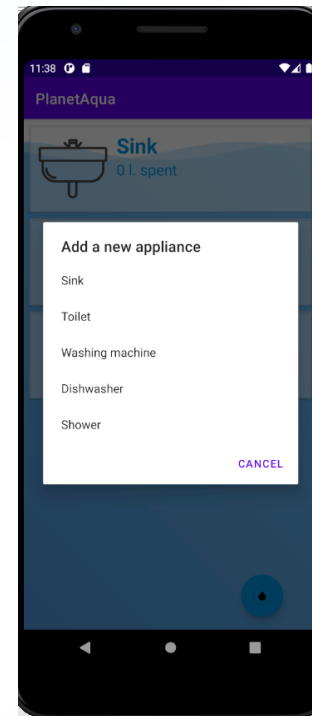

# How does it work?

Very easy!

- Tap once to start counting water
- Tap again to stop
- Many appliances already have an average consumption measure

- Add new items
- Rename them to remember which sink is which
- The background water level will show whether you are overspending

**THANK YOU!**
